* SPRING STAND (0-9): 0 = no plants remaining; 9 = full stand

### Lind Soft White Winter Wheat--Preliminary Data

1. Grain yield in the 2015 Lind soft white winter wheat trial averaged 38 bushels/acre, slightly below the five-year average of 41 bushels/acre. The Lind nursery was located on the WSU Lind Dryland Experiment Station about three miles NE of Lind, WA. All yield values within the 10% LSD range of the highest yield are shown in bold.

2. This nursery was seeded on September 4, 2014 following fallow. Seeding rate was 50#/acre and base fertilizer was 50#/acre. Seeding conditions were dry, leading to poor stand establishment by some entries.

3. Spring stand ratings reflect both seedling emergence and winter-kill.
