### Creston Soft White Winter Wheat – Preliminary Data

1. Grain yield in the Creston soft white winter wheat trial averaged 118 bushels/acre, equivalent to the 5-year average for this location. The Creston nursery was located about five miles north of Creston, WA (Jerry Krause, cooperator).
2. This nursery was seeded on 11 September, 2009 following fallow. Seed was placed at an 85#/acre seeding rate using a Hoe type drill with 9-inch spacing. Base fertilizer was 80#N/acre. Fall seeding conditions and winter survival were good. There was little stripe rust.
3. Yields ranged from 95 bu/ac to 139 bu/acre. All yield values within the 10% LSD range of the highest yield are shown in bold and 16 of the 60 trial entries are in the top group. Xerpha was the highest yielding variety. The lattice RCBD experimental design improved variation allocation during statistical analysis and the CV by 5% for yield.
4. Test weights were good and averaged 60.3 lb/bu with a range from 57.5 to 62.4 lb/bu.
5. Grain protein averaged 10.6% with a range of 9.3 to 12.1%. Plant height averaged 41 inches.
