RE: Eastern Oregon Disease Update

Stripe Rust

Stripe rust was found this week at the Wasco (Dufur) and Sherman (Kaseberg) county variety testing locations. In addition, I received a report of stripe rust in a commercial field in Sherman County. Growers in these regions and throughout eastern Oregon and southeastern Washington are encouraged to scout their fields and tank mix a fungicide with their spring herbicide if stripe rust is present in their field and/or they are growing a highly susceptible variety (Mary, Brawl CL+, Kaseberg, SY Ovation, ORCF-102 are examples).
